

FB2000 Fixed Guard-Rail System

FB2000 is a permanent guard-rail system for providing collective protection for unrestricted use (complies with Category CPI – HCL Fall Protection Systems: Selection Guidance Chart).

FB2000 meets the requirements of **BS EN 6399 Part 1** and **Building Regulations** loading requirements.

THE BENEFITS

- Individually designed to meet roof and non-roof applications.
- Full range of accessories including infill panels and curved sections.
- Suitable for any roof pitch.
- Adaptable system enables future changes in layout.
- Component range allows for changes in roof level.

MAINTENANCE

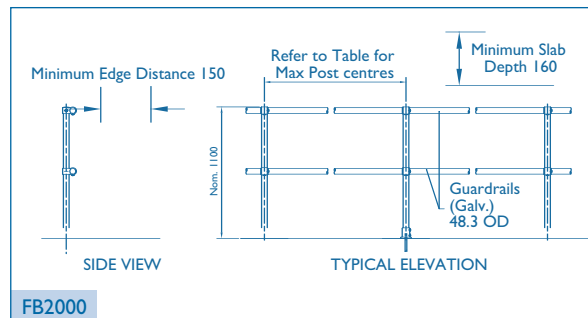

The FB2000 guard-rail system provides a durable low maintenance solution to the provision of collective fall prevention.

On standard systems, all components are fully galvanised to BSEN 180 1461 to provide a corrosion resistant finish. Coloured finishes can be obtained through the application of acrylic polyurethane finishes or polyester powder coating to meet any specific RAL requirement.

Where aesthetics are a premium or the environment particularly aggressive then systems can be manufactured from other materials such as aluminium alloy or stainless steel.
